

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-108. (Cancelled)

109. (New) A computer-implemented method for enabling a user to select for review, using a client computer system coupled to the Internet, a gift registry associated with a retailer, the method comprising:

receiving a search request from the user;

searching, from among at least two unaffiliated retailers, for a gift registry that matches the search request;

communicating to the user information identifying the matching gift registry; and

enabling the user to select the matching gift registry, such that, in response to the selection, the gift registry is automatically displayed to enable the user to review information concerning items contained in the matching gift registry.

110. (New) The computer-implemented method of claim 109 wherein a plurality of gift registries from among said at least two unaffiliated retailers is copied to a local computer system at a time prior to said searching and said searching is performed using said plurality of gift registries stored on said local computer system.

111. (New) A computer-implemented method for enabling a user to select for review, using a client computer system coupled to the Internet, a gift registry associated with a retailer, the method comprising:

receiving a search request from the user;

searching for gift registries that match the search request;

communicating to the user a list identifying a plurality of matching gift registries, at least two of the plurality of matching gift registries being associated with unaffiliated retailers; and

enabling the user to select a gift registry identified in the list, such that, in response to the selection, the selected gift registry is automatically displayed to enable the user to review information concerning items contained in the gift registry.

112. (New) The computer-implemented method of claim 111 wherein a plurality of gift registries from said unaffiliated retailers is copied to a local computer system at a time prior to said searching and said searching is performed using said plurality of gift registries stored on said local computer system.

113. (New) The computer-implemented method of claim 111 wherein said list identifying said plurality of matching gift registries indicates a name and a retailer associated with each gift registry in said plurality of matching gift registries.

114. (New) The computer-implemented method of claim 113 wherein said enabling the user to select a gift registry comprises enabling the user to select the name associated with the gift registry.

115. (New) The computer-implemented method of claim 111 wherein said list identifying said plurality of matching gift registries indicates a name and a retailer associated with each of said at least two of the plurality of matching gift registries in said plurality of matching gift registries.

116. (New) The computer-implemented method of claim 115 wherein said enabling the user to select a gift registry comprises enabling the user to select the name associated with one of said at least two of the plurality of matching gift registries in said plurality of matching gift registries.

117. (New) The computer-implemented method of claim 111 wherein the searching includes searching over the Internet for a gift registry stored on a remote computer system coupled to the Internet.

118. (New) A method, implemented on a computer system coupled to the Internet, for enabling a user to select a gift registry for review, the method comprising:

receiving a search request from the user;

searching for gift registries that match the search request;
communicating to the user's computer system, via the Internet, information that identifies a plurality of matching gift registries, wherein said plurality of matching gift registries includes at least two gift registries from unaffiliated retailers; and
enabling the user's computer system to receive a selection from the user of a gift registry from among the plurality of matching gift registries and, in response to the selection, causing the user's computer system to automatically present information concerning a plurality of items contained in the selected gift registry.

119. (New) The method of claim 118 wherein

said information that identifies said plurality of matching gift registries comprises names and retailers associated with gift registries in said plurality of matching gift registries; and

said enabling the user's computer system to receive said selection comprises enabling the user's computer system to receive a selection of a name associated with said selected gift registry.

120. (New) The method of claim 118 wherein said plurality of matching gift registries includes a first gift registry in a first gift registry database and a second gift registry in a second gift registry database wherein said first gift registry database and said second gift registry database have different data structures.

121. (New) The method of claim 118 wherein a plurality of gift registries from said unaffiliated retailers is copied to a local computer system at a time prior to said searching and said searching is performed using said plurality of gift registries stored on said local computer system.

122. (New) A method, implemented on a client computer system, for enabling a user to select for review, over the Internet, a gift registry associated with a retailer, the method comprising:

receiving a search request from the user;
searching, from among at least two unaffiliated registry providers, for a gift registry that matches the search request;

communicating to the user information identifying the gift registry that matches said search request; and

enabling the user to select the gift registry, such that, in an automated response to the selection, the user is provided with information identifying items included in the selected gift registry.

123. (New) The method of claim 122 wherein said information identifying the gift registry comprises a name and a registry provider associated with the gift registry, and wherein said enabling the user to select the gift registry comprises enabling the user to select the name associated with the gift registry.

124. (New) The method of claim 122 wherein a registry database associated with at least one of said at least two unaffiliated registry providers is stored on a remote computer system coupled to the Internet.

125. (New) The method of claim 122 wherein a plurality of gift registries from said unaffiliated retailers is copied to a local computer system at a time prior to said searching and said searching is performed using said plurality of gift registries stored on said local computer system.

126. (New) A method implemented by a local computer system coupled to the Internet for enabling a user to review a gift registry associated with a retailer, the method comprising:

enabling the user to enter a search request over the Internet;

searching for a gift registry that matches the search request, the searching including a search for a first gift registry in a first gift registry database on the local computer system and a search for a second gift registry in a second gift registry database on a remote computer system coupled to said local computer system by the Internet, said first and second gift registry databases each being associated with unaffiliated retailers;

communicating to the user information identifying a gift registry that matches the search request, wherein the matching gift registry is located on the remote computer system; and

causing, in response to a selection of the gift registry by the user, a plurality of items contained in the selected gift registry to be identified to the user.

127. (New) The method of claim 126 wherein
said information identifying said matching gift registry comprises a name and a
retailer associated with said matching gift registry.

128. (New) The method of claim 126, the method further comprising:
enabling the user to select for purchase a desired item from among said plurality of
items.

129. (New) A method implemented by a local computer system coupled to the Internet for
enabling a user to review a gift registry associated with a retailer, the method comprising:
enabling the user to enter a search request over the Internet;
searching for gift registries that match the search request, the searching including a
search for a first gift registry and a search for a second gift registry, said first and second gift
registries each being associated with an unaffiliated registry provider;
communicating to the user information identifying a plurality of gift registries
matching the search request, said plurality of matching gift registries including the second
gift registry;
receiving from the user a selection of a desired one of the plurality of matching gift
registries; and
causing, in response to the selection, a plurality of items contained in the selected gift
registry to be identified to the user.

130. (New) The method of claim 129 wherein the first gift registry is stored on the local
computer system and the second gift registry is stored on a remote computer system.

131. (New) The method of claim 130 wherein the local computer system storing a first
registry database having a first data structure and the remote computer system storing a
second registry database having a second data structure, and wherein
(i) the search for the first gift registry comprises searching the first registry database
for the first gift registry;
(ii) the search for the second gift registry comprises searching the second registry
database for the second gift registry; and
(iii) the first data structure is different from the second data structure.

132. (New) The method of claim 130 wherein the second gift registry is the desired one gift registry selected by the user.

133. (New) The method of claim 130, wherein

the plurality of matching gift registries includes the first gift registry located on the local computer system;

the desired one of the plurality of matching gift registries is the first gift registry; and

the plurality of gift items identified to the user are gift items contained in the first gift registry.

134. (New) The method of claim 130, wherein the desired one of the plurality of matching gift registries is the first gift registry, the method further comprising:

facilitating the purchase of a gift item in said plurality of items.

135. (New) The method of claim 130, wherein the desired one of the plurality of matching gift registries is the first gift registry, the method further comprising:

receiving a selection of an item in said plurality of items; and

effecting a purchase of said item.

136. (New) The method of claim 129 wherein the selected gift registry is stored on the local computer system.

137. (New) The method of claim 129 wherein the selected gift registry is stored on a remote computer system.

138. (New) The method of claim 129 wherein

said information identifying a plurality of gift registries includes names and registry providers associated with said plurality of gift registries; and

said selection received from said user is a selection of a name in said information.

139. (New) The method of claim 129, the method further comprising receiving from the user a purchase selection of a desired item from among said plurality of items.

140. (New) The method of claim 129 wherein the first gift registry and the second gift registry are stored on a remote computer system.

141. (New) A method implemented by a local computer system coupled to the Internet for enabling a user to review a gift registry, the method comprising:

receiving a search request from the user;

searching for a gift registry that matches the search request, from among at least two registry providers, at least one of the gift registries being located on a remote computer system coupled to the Internet;

communicating to the user information identifying the gift registry that matches the search request; and

causing to be displayed to the user, in response to the user's selection of the gift registry, information pertaining to items contained in the gift registry.

142. (New) The method of claim 141 wherein

said information identifying the gift registry comprises a name and a registry provider associated with said registry; and

the user's selection of the gift registry comprises a selection of a name associated with the gift registry.

143. (New) The method of claim 141 wherein each of said at least two registry providers represents an unaffiliated retailer.

144. (New) The method of claim 141 wherein

(i) a first registry database is associated with one of said at least two registry providers;

(ii) a second registry database is associated with another of said at least two registry providers;

(iii) said first registry database has a different data structure than said second registry database; and

(iv) one of said at least one gift registries is in said first or said second registry database.

145. (New) A method, implemented by a local computer system coupled to the Internet, for enabling a user to review a registry of gift items, the registry of gift items being accessible by the user over the Internet, the method comprising:

receiving a search request from the user;

conducting, on at least two registry databases, a search for a registry that matches the search request, wherein at least one of the at least two registry databases is located on a remote computer system coupled to the Internet; and

facilitating a display to the user of a plurality of items contained in the matching registry.

146. (New) The method of claim 145 wherein the at least two registry databases includes registry databases having different data structures.

147. (New) The method of claim 145 wherein the matching registry is located on the remote computer system coupled to the Internet.

148. (New) The method of claim 145 wherein the matching registry is not located on the remote computer system.

149. (New) A method, implemented by a computer system coupled to the Internet, for enabling a user to review a registry of gift items, the registry of gift items being accessible by the user over the Internet, the method comprising:

receiving a search request from the user;

conducting a search for registries that match the search request;

transmitting to the user a list of registries located by the search, wherein: (i) at least two registries on the list are each associated with an unaffiliated retailer, and (ii) at least one registry on the list is located on a remote computer system coupled to the Internet; and

in response to the user selecting a registry in the list of registries, facilitating a display to the user of a plurality of items contained in the selected registry.

150. (New) The method of claim 149 wherein

said list of registries comprises names and retailers associated with the registries identified by the search; and

the user selection of said registry in the list of registries comprises a selection of a name associated with the selected registry.

151. (New) A method for enabling a user to review a gift registry, the method comprising:

- receiving a search request from the user over the Internet;
- sending, in response to the search request, information that identifies a plurality of gift registries that match the search request, wherein the plurality of matching gift registries includes at least two gift registries each of which is from an unaffiliated registry provider; and
- enabling the user to select the gift registry from among the plurality of gift registries such that, in response to the selection, a remote computer system that includes the selected gift registry is accessed over the Internet.

152. (New) The method of claim 151 wherein

- said information comprises names and registry providers associated with the plurality of gift registries; and
- said enabling the user to select a gift registry from among the plurality of gift registries for review comprises enabling the user to select names associated with the plurality of gift registries.

153. (New) The method of claim 151 wherein said at least two gift registries includes a first gift registry that is from a first registry database, associated with a first unaffiliated registry provider, and a second gift registry that is from a second registry database, associated with a second unaffiliated registry provider, and wherein the data structure of said first registry database is different from the data structure of said second registry database.

154. (New) The method of claim 151, the method further comprising:

- presenting, in response to a selection of the gift registry, gift information contained in the gift registry.

155. (New) The method of claim 151, the method further comprising:

- enabling the user to select an item from the selected gift registry for purchasing.

156. (New) A method implemented by a computer system for enabling the review of a gift registry, the method comprising:

receiving a search request over the Internet;

searching for a gift registry that matches the search request, wherein the searching includes searching the gift registries of unaffiliated retailers; and

causing a user's computer system to present information that identifies the matching gift registry.

157. (New) The method of claim 156 wherein said information that identifies the matching gift registry comprises a name and a retailer associated with the matching gift registry.

158. (New) The method of claim 156 wherein

(i) the unaffiliated retailers include a first unaffiliated retailer and a second unaffiliated retailer,

(ii) a gift registry database of the first unaffiliated retailer has a data structure that is different from a data structure of a gift registry database of the second unaffiliated retailer, and

(iii) said searching comprises searching the gift registry database of the first unaffiliated retailer and the gift registry database of the second unaffiliated retailer.

159. (New) The method of claim 156, the method further comprising enabling the user's computer system to purchase a gift item in the matching gift registry.

160. (New) The method of claim 156, the method further comprising:

copying a first registry database from a remote computer system to a local computer system; and wherein said searching includes searching said first registry database.

161. (New) The method of claim 156, the method further comprising:

enabling the user to purchase a gift item contained in the matching gift registry.

162. (New) A method for presenting gift information to a user, the method comprising:

receiving over the Internet a search request from the user; and

transmitting over the Internet to the user, in response to the search request, a list identifying a plurality of gift registries that match the search request, wherein the list identifies gift registries associated with more than one retailer.

163. (New) The method of claim 162 wherein said list comprises names and retailers associated with said plurality of gift registries and said search request comprises a particular name in said list.

164. (New) The method of claim 162, the method further comprising receiving, from the user, a selection of a gift registry from among the gift registries identified on the list.

165. (New) The method of claim 164, the method further comprising presenting a plurality of gift items contained in the selected gift registry.

166. (New) The method of claim 165, the method further comprising receiving instructions to purchase a gift item in said plurality of gift items.

167. (New) The method of claim 162 wherein a first gift registry in said plurality of gift registries is from a first gift registry database associated with a first retailer in said more than one retailer and a second gift registry in said plurality of gift registries is from a second gift registry database associated with a second retailer in said more than one retailer.

168. (New) The method of claim 167 wherein said first registry database has a different data structure than said second registry database.

169. (New) The method of claim 167 wherein at least one of said first registry database and said second registry database is copied to a local computer system at a time prior to said transmitting.
